

David G. McKenney (COMP1001A - Computing for Arts Students)

Made me switch my econ concentration to computational analysis because you made the class such a joy! Great prof

My favourite prof of the term hands down. Really appreciate his effort to not make lectures boring. Even if I don't go to classes, I'll always watch the online lectures afterwards cause they're actually worth the time.

great

Thank you for recording and uploading all your lectures, it was a massive help during studying and assignments.

Loved the class. You've got a great sense of humour and I really enjoyed the way you brought that to teaching. Would hands down recommend this class to anyone in arts or social sciences who is interested in coding. Also, I really appreciated you setting up the class discord. Great course, keep it up!

I really liked studying with Dave McKenney, ha made the material fun by having examples that I cared about. I would take a course with him again.

You are a great professor, Dave. You made computer science easy to understand and follow along during lectures. The recorded lectures really helped when studying and reviewing for evaluations. Thank you!

Its hard to constantly focus on what he is saying when he is just talking and talking and talking for an hour and 30 minutes giving us data we are not familiar with. however he seems to know what he is talking about. but the assignments sometimes get really too difficult and you have to go to sources outside the class to solve them which shouldnt be the case. he is also a nice guy however he has to tone down the

difficulty of the assignments especially assignment 3 and 4. which he covers PARTIALLY in class.

He is a great lecture

Wonderful professor. I am not the best at Comp Sci and I really don't fancy the subject, but his recorded lectures and very clear teaching has made it a little less worse

I enjoyed your class & your jokes. Made learning a completely foreign topic interesting.

Not sure if this happened at the beginning of the semester but if there were a way to meet or know who the TA's are that would be helpful, so that when you show up for office hours you know who you're looking for.

Acts as if he's teaching a 4 th year comp class instead of a first year art class for comp. does explain anything just states it and moves on. Really hard to follow, had to get comp major guys to help us understand everything and walk us through the course.

Great teacher, single handedly saving the comp sci department at Carleton
