

David G. McKenney (COMP1405B - Intro to Computer Science I)

Great job over all, I would suggest making your slides a little more detailed or putting more information on an individual slide and having the the parameters and descriptions of functions elaborated on a little more in the slides.
Keep up the good work! You're a great speaker and give fun lectures. Hope to have you again.

He is an amazing instructor, always available to help outside of class time. Funny, well organized, and he does the best with the course material that he has to deal with.

All's good for this instructor. Most noticeable is that instructor's materials are neatly uploaded on CU Learn which makes it easier for students to catch up.

Only thing is that instructor need to improve on voice. Need to be louder and to stress on key points during lecture.

An excellent instructor!!!

Super great professor!!!

Great class! Topics were made fun and entertaining, but also learned a ton!

Super great professor, I really enjoyed your class! I really appreciate how much you genuinely care about our success, and how available you are to answer any questions we have about the material. In the lectures, I really like how you do a lot of coding examples, I found them really helpful in understanding how to apply what we've talked about in the lecture.

Thank you for a great semester!

Dave is literally one of the best profs I've ever had. In all honesty, my first year would be a different experience if I had literally any other professor. He is a perfect blend of being a competent and approachable professor. He makes it much more convenient to

talk to him by being open on multiple lines of communication. I wish he would teach the second year courses so I could have him again, but Dave is a great prof for the first years so they could get comfortable for university.

I have had the pleasure of being one of Davids students for a single semester, and I already know he will be one of my all time favourite profs, great guy

Best prof at CU. Hope to have for future classes

Very good teacher, very helpful, and very interactive. Love everything about the class.

He is one of best instructor I have been met
Assignments questions are the best practices for the materials
I Have tiny note about explaing the tutorials examples
Moving the corser up and dawn district me so I need to go back to review the tutorial again for better understand , recording tutorial is my best
Thank you so much
You are the best

your class is awesome!! thanks for teaching!

excellent prof, had the right amount of humor needed to make each lecture fun. always engaged with the students and explained every concept very thoroughly. would recommend every time to anyone, 10/10.

Excellent Prof - Excellent Course

Great teacher with good people skills. Keeps the class interesting and funny while also keeping it professional. Overall great teacher

You are one of my favourite profs.

You're my favourite prof. Thank you for making such an effort to connect with your students. You give first year students such a good impression of Carleton. Keep doing you.

As a student with a background in CS, I loved being in his class. Although we went over basics for the most part, he made the class interesting enough to keep my attention. Great prof!

Best prof. 10/10. Excellent hair.

pretty good

Good job!

Better for tests to be done on computers to avoid making minor errors or don't deduct too much marks for said minor errors. Otherwise good job.

Easily one of the best teacher at Carleton. Records his lectures and posts them online for us to revisit if we missed something during lecture or we missed class. He is also available on Discord and replies very quickly if we have any questions and concerns. Other comp sci teachers needs to follow his ways.

Hello professor McKenney,

Thank you for a great first term of university! I appreciate the things your class did differently from the other 1405 classes such as hinting to the real world applications of Python and handing out tutorials in advance. It was really great having you first term, I hope I can be in one of your classes again in the future.

Probably my favorite teacher this semester. The lectures felt very relaxed and I really enjoyed your teaching style.

Thanks for a great semester! :)

A very kind guy. Will take time out of his own schedule to address my concerns and questions. He is even accessible over more than just email and in-person which is great.

Very good professor that teaches the required material effectively. My only complaint is that we spend a few classes on unrelated concepts like game development rather than improving base coding skills. Otherwise Dave is a great professor and it was a joy to be in his class.

Legend

Thank you very much ☺

decent guy, needs to add more enthusiasm in lectures

Really enjoyed the class! Professor Dave's lectures are very interesting and he makes it very easy to understand all of the content. Assignments and tutorials were all reasonable and interesting.

David is My first year cs professor. He teaches really well and also easy understand. He is really funny person. I hope I will have his course at the future.

good professor in my opinion

Nice computer

best professor ive had this semester
